

Mario Larch's Regional Trade Agreements Database

1. What are the main features?

This database includes all multilateral and bilateral regional trade agreements (RTA) as notified to the World Trade Organization for the last 68 years from 1950 to 2017. There are 499 agreements in the dataset differentiated along four categories. Additionally there are variables indicating whether countries were founding members, joined later, or left the agreement.

2. What is the source used?

WTO's Regional Trade Agreements Gateway:

<http://rtais.wto.org/UI/PublicMaintainRTAHome.aspx>.

When necessary details were not available in the main source (e.g. joining dates of certain members), we relied on Wikipedia and individual trade agreement websites to retrieve the information.

There are a few cases where the data notified to the WTO do not correspond to the actual existence of a RTA (as, for example, the Southern African Customs Union). This may be due to the case that some agreements or predecessors of agreements may not have been notified to the WTO. In such cases, we follow the information given on the WTO website.

3. What type of agreements are included?

According to the WTO, the member countries of an RTA can notify one of the following (combinations of) agreement types:

- Customs Union
- Free Trade Agreement
- Partial Scope Agreement
- Economic Integration Agreement
- Free Trade Agreement & Economic Integration Agreement
- Partial Scope & Economic Integration Agreement
- Customs Union & Economic Integration Agreement

There are four distinct (but not mutually exclusive) types of RTAs:

- A Free Trade Agreement (FTA), as defined in [Paragraph 8\(b\) of Article XXIV of GATT 1994](#);
- A Customs Union (CU), as defined in [Paragraph 8\(a\) of Article XXIV of GATT 1994](#);
- An Economic Integration Agreement (EIA), as defined in [Article V of GATS](#); or
- A "Partial Scope" Agreement (PS); "Partial Scope" which is not defined or referred to in the WTO Agreement, means that the agreement covers only certain products. Partial scope agreements are notified under paragraph 4(a) of the Enabling Clause.

In the database, these RTA types are captured by the following RTA-type dummy variables:

- cu = Customs Union

- eia = Economic Integration Agreement
- fta = Free Trade Agreement
- ps = Partial Scope Agreement

In addition, there are the following RTA-type dummy variables that capture a combination of RTA types:

- rta = Regional Trade Agreement, equal to 1 if any of the other RTA-type dummies is 1, otherwise 0.
- ftaandeia = Free Trade Agreement and Economic Integration Agreement, equal to 1 if either fta or eia is 1, otherwise 0.
- cuandeia = Customs Union and Economic Integration Agreement, equal to 1 if either cu or eia is 1, otherwise 0.

For more information and definitions, see the WTO website:

http://rtais.wto.org/UserGuide/RTAIS_USER_GUIDE_EN.html

4. Are inactive agreements also included?

Yes, if they are listed by the WTO.

5. What is covered?

Time period: 1950 – 2017

Country coverage: the underlying design dataset spans the bilateral relationship between 280 countries. Hence, there are $280 \times 280 \times (2017 - 1950 + 1) = 5,331,200$ observations, including many country-pairs at specific time periods where there are no agreements in place.

6. When was the database last updated?

November 7th, 2018: concerning RTAs.

November 7th, 2018: corrections.

7. What are the available version of the database?

There are two versions available:

- the essential database “rta_20181107.dta”
- the complete database “rta_individual_agreements_20181107.dta”

The essential database “rta_20181107.dta” includes all RTA-type dummies for “rta”, “cu”, “fta”, “eia”, “ps”, “cuandeia”, and “ftaandeia”. The summary statistic looks as follows:

The complete database “rta_individual_agreements_20181107.dta” includes three dummies for each of the 499 individual agreements, in addition to the RTA-type dummy variables included in the essential database:

- The first dummy is the overall agreement dummy, named after the agreement, or the 6-letter combination of the 3-letter iso3-country-codes of both of the member countries. It is equal to 1 from the year when the agreement entered into force until the end of the agreement, otherwise 0.
- The second dummy is the first one augmented with the suffix “_n” which is only equal to 1 in the year when the agreement was concluded, otherwise 0.
- The third dummy is the first one augmented with the suffix “_j” which is equal to 1 in all subsequent years but not the founding year, otherwise 0.

The second and third additional dummy variables allow distinguishing between the effects from forming and founding RTAs. The sum of the second and third dummy is the overall agreement dummy.

8. How do I read the agreement abbreviations?

For bilateral (and sometimes trilateral) agreements the name of the agreement dummy is simply the combination of the iso3-country-codes of the member countries or the agreement name itself. For bigger agreements the following list of shortcuts were used:

AA	Agadir Agreement
AFTA	ASEAN Free Trade Area
APTA	Asia Pacific Trade Agreement
BAFTA	Baltic Free Trade Area
CACM	Central American Common Market
CAFTADR	Dominican Republic - Central America - United States Free Trade Agreement
